

JAVASCRIPT DEVELOPMENT

Sasha Vodnik, Instructor

HELLO!

- 1. Pull changes from the svodnik/JS-SF-8-resources repoto your computer
- 2. Open the starter-code folder in your code editor

JAVASCRIPT DEVELOPMENT

OBJECTS AND JSON

LEARNING OBJECTIVES

At the end of this class, you will be able to

- Identify likely objects, properties, and methods in real-world scenarios
- Create JavaScript objects using object literal notation
- Implement and interface with JSON data

AGENDA

- Homework submission & review
- Objects, properties, and methods
- Lab: Translate real world scenarios into objects
- Lab: Create objects
- JSON
- Lab: Work with JSON

INTRO TO CRUD AND FIREBASE

WEEKLY OVERVIEW

WEEK 4

Slackbot Lab / Objects & JSON

WEEK 5

Intro to the DOM / Intro to jQuery

WEEK 6

Ajax & APIs / Asynchronous JavaScript & Callbacks

EXIT TICKET QUESTIONS

- 1. practical examples of hoisting and gotchas
- 2. Hubot installfest was complicated; is there a better alternative exercise for us? (paraphrase)
- 3. What's the difference between msg.send vs msg.reply? How do you work with APIs?
- 4. When would it be valuable to use hoist?
- 5. Do most people create hubots with the same script as coffee.example or javascript
- 6. How to store/use variables within slackbot .js file

EXIT TICKET QUESTIONS (CONTINUED)

- 7. How can I have a counter that increments every time the bot is called? How can I get this counter to de-increment over time?
- 8. How could I find out if two commas were used within a set number of characters (regEx?)

WARMUP EXERCISE

TYPE OF EXERCISE

Pairs

TIMING

3 min

1. For the thing you've been assigned, make a list of attributes (descriptions) and actions (things it can do).

OBJECTS

OBJECTS ARE A SEPARATE DATA TYPE

AN OBJECT IS A COLLECTION OF PROPERTIES

```
let favorites = {
    fruit: "apple",
    vegetable: "carrot"
}
```

PROPERTY = KEY & VALUE

- A property is an association between a key and a value
 - key: name (often descriptive) used to reference the data
 - value: the data stored in that property
- A property is sometimes referred to as a key-value pair

```
let favorites = {
    fruit: "apple",
    values
    vegetable: "carrot"
```

KEY-VALUE PAIR

A property is sometimes referred to as a key-value pair

```
let favorites = {
   fruit: "apple",
   vegetable: "carrot"
}
```

AN OBJECT IS NOT ORDERED

```
fruit: "apple",
  vegetable: "carrot",
  fungus: "trumpet mushroom"
]
```

OBJECTS AND JSON

A METHOD IS A PROPERTY WHOSE VALUE IS A FUNCTION

```
let favorites = {
  fruit: "apple",
                     method
  vegetable: "carrot",
  declare: function()
    console.log("I like fruits and vegetables!");
```

YOU REFERENCE A PROPERTY WITH DOT NOTATION

object

object name

referencing properties

```
let favorites = {
  fruit: "apple",
  veg: "carrot",
  declare: function() {
    console.log("I like fruit and veg");
  }
}
```

```
favorites fruit property name
> "apple"
favorites veg
> "carrot"
```

EXERCISE — **OBJECTS**

KEY OBJECTIVE

Create JavaScript objects using object literal notation

TYPE OF EXERCISE

Pairs (same pair as for previous exercise)

TIMING

3 min

- 1. On your desk or on the wall, write code to create a variable whose name corresponds to the thing you were assigned in the previous exercise (cloud, houseplant, nation, office chair, or airplane).
- 2. Write code to add a property to the object and specify a value for the property.
- 3. Write code to add a method to the object, and specify a value for the method (use a comment or console.log() statement for the function body).
- 4. BONUS: Rewrite your answers for 1-3 as a single JavaScript statement.

REAL WORLD SCENARIO

A user, browsing on a shopping website, searches for size 12 running shoes, and examines several pairs before purchasing one.

OBJECTS = NOUNS

A user, browsing on a shopping website, searches for size 12 running shoes, and examines several pairs before purchasing one.

implicit object:

shopping cart

PROPERTIES = ADJECTIVES

A user, browsing on a shopping website, searches for size 12 running shoes, and examines several pairs before purchasing one.

implicit properties:

for each pair of shoes:

price color for the shopping cart:

contents total shipping tax

METHODS = **VERBS**

A user, browsing on a shopping website, searches for size 12 running shoes, and examines several pairs before purchasing one.

implicit methods:

for each pair of shoes:

add to cart

for the shopping cart:

calculate shipping calculate tax complete purchase remove item

PRACTICE: REAL WORLD SCENARIOS & OBJECTS

EXERCISE — **REAL WORLD SCENARIOS & OBJECTS**

KEY OBJECTIVE

 Identify likely objects, properties, and methods in real-world scenarios

TYPE OF EXERCISE

• Groups of 3-4

TIMING

10 min

- 1. Read through your scenario together.
- 2. Identify and write down likely objects, properties, and methods in your scenario. (Remember to consider implicit objects as well as explicit ones.)
- 3. Choose someone to report you results to the class.

OBJECTS AND JSON

PRACTICE MONKEYS

LAB — OBJECTS

KEY OBJECTIVE

Create JavaScript objects using object literal notation

TYPE OF EXERCISE

Individual or pair

TIMING

20 min

- 1. Open starter-code > 1-object-exercise >
 monkey.js in your editor.
- 2. Create objects for 3 different monkeys each with the properties name, species, and foodsEaten, and the methods eatSomething(thingAsString) and introduce.
- 3. Practice retrieving properties and using methods with both dot notation and bracket syntax.

JSON IS A DATA FORMAT BASED ON JAVASCRIPT

object JS0N

```
let instructor = {
  firstName: 'Sasha',
  lastName: 'Vodnik',
  city: 'San Francisco',
  classes: [
    'JSD', 'FEWD'
  classroom: 8,
  launched: true,
  dates: {
    start: 20170906,
    end: 20171113
```

```
"firstName": "Sasha",
"lastName": "Vodnik",
"city": "San Francisco",
"classes": [
 "JSD", "FEWD"
"classroom": 8,
"launched": true,
"dates": {
 "start": 20170906,
  "end": 20171113
```

OBJECTS AND JSON

JSON

- Easy for humans to read and write
- Easy for programs to parse and generate

```
"firstName": "Sasha",
"lastName": "Vodnik",
"city": "San Francisco",
"classes": [
  "JSD", "FEWD"
"classroom": 8,
"launched": true,
"dates": {
  "start": 20170906,
  "end": 20171113
```

JSON IS NOT JAVASCRIPT-SPECIFIC

Used across the web by programs written in many languages

JSON RULES

- Property names must be double-quoted strings.
- Trailing commas are forbidden.
- Leading zeroes are prohibited.
- In numbers, a decimal point must be followed by at least one digit.
- Most characters are allowed in strings; however, certain characters (such as ', ", \, and newline/tab) must be 'escaped' with a preceding backslash (\) in order to be read as characters (as opposed to JSON control code).
- All strings must be double-quoted.
- No comments!

EXERCISE — JSON

KEY OBJECTIVE

▶ Implement and interface with JSON data

TYPE OF EXERCISE

• Groups of 2-3

TIMING

3 min

- 1. Write JSON code that contains an error.
- 2. Write your code on the wall.
- 3. When everyone's code is done, we will look at the code together as a class and practice identifying errors.

- Parse the JSON to a JavaScript object (or array!)
- View the resulting data structure.
- Locate the data you want to reference within the data structure.
- Use dot syntax and/or square bracket notation to reference the next level down, then repeat for each level until you get to the data you're seeking.

- 1. PARSE THE JSON TO A JAVASCRIPT OBJECT (OR ARRAY!)
 - 2. VIEW THE RESULTING DATA STRUCTURE
 - 3. LOCATE THE DATA YOU WANT TO REFERENCE
- 4. USE DOT SYNTAX OR SQUARE BRACKET NOTATION TO MOVE DOWN A LEVEL, THEN REPEAT

1. PARSE THE JSON TO A JAVASCRIPT OBJECT (OR ARRAY!)

```
let person = '{"firstName":
"Sasha","lastName": "Vodnik","city":
"San Francisco","classes": ["JSD",
"FEWD"],"classroom": 8,"launched":
true,"dates": {"start": 20170906,"end":
20171113}}';
```

let personObject = JSON.parse(person);

2. VIEW THE RESULTING DATA STRUCTURE

```
let personObject = JSON.parse(person);
console.log(personObject);
>
```

```
city: "San Francisco"
▼ classes: Array(2)
    0: "JSD"
    1: "FEWD"
    length: 2
    ▶ __proto__: Array(0)
    classroom: 8
▼ dates:
    end: 20171113
    start: 20170906
    ▶ __proto__: Object
    firstName: "Sasha"
    lastName: "Vodnik"
    launched: true
```

OBJECTS AND JSON

WORKING WITH NESTED DATA STRUCTURES

3. LOCATE THE DATA YOU WANT TO REFERENCE

4. USE DOT SYNTAX OR SQUARE BRACKET NOTATION TO MOVE DOWN A LEVEL, THEN REPEAT

direct property:

```
city: "San Francisco"
▼ classes: Array(2)
   0: "JSD"
   1: "FEWD"
   length: 2
 ▶ __proto__: Array(0)
 classroom: 8
▼ dates:
   end: 20171113
   start: 20170906
 ▶ __proto__: Object
 firstName: "Sasha"
 lastName: "Vodnik"
 launched: true
```

```
console.log(personObject.city);
> "San Francisco"
```

4. USE DOT SYNTAX OR SQUARE BRACKET NOTATION TO MOVE DOWN A LEVEL, THEN REPEAT

```
city: "San Francisco"
▼ classes: Array(2)
   0: "JSD"
   1: "FEWD"
   length: 2
 ▶ __proto__: Array(0)
 classroom: 8
▼ dates:
   end: 20171113
   start: 20170906
 ▶ __proto__: Object
 firstName: "Sasha"
 lastName: "Vodnik"
 launched: true
```

```
direct property > array element
console.log(personObject.classes[0]);
> "JSD"
```

4. USE DOT SYNTAX OR SQUARE BRACKET NOTATION TO MOVE DOWN A LEVEL, THEN REPEAT

```
direct property > nested object property
console.log(personObject.dates.start);
> 20170906
```

EXERCISE — **NESTED DATA STRUCTURES**

KEY OBJECTIVE

▶ Implement and interface with JSON data

TYPE OF EXERCISE

• Groups of 2-3

TIMING

3 min

- 1. Write JSON code containing a nested data structure (at least one property whose value is an array or an object).
- 2. Write JavaScript code to reference at least one value in the nested data structure.
- 3. Share your code on the Slack channel for today.

OBJECTS AND JSON

PRACTICE JSON

LAB — JSON

KEY OBJECTIVE

▶ Implement and interface with JSON data

TYPE OF EXERCISE

Individual or pair

TIMING

until 9:20

- 1. Open starter-code > 3-json-exercise > app.js in your editor.
- 2. Follow the instructions to write code that produces the stated output.

LEARNING OBJECTIVES – REVIEW

- Identify likely objects, attributes, and methods in real-world scenarios
- Create JavaScript objects using object literal notation
- Implement and interface with JSON data

NEXT CLASS PREVIEW

Intro to the DOM

- Identify differences between the DOM and HTML.
- Explain the methods and use the DOM in JavaScript.
- Use DOM manipulation to add elements to the browser window and modify existing elements.

Exit Tickets!

(Class #6)
